ASSET MIX

DIVIDEND HISTORY

MANAGEMENT EXPENSE RATIO

SHAREHOLDER TAXATION

- Qualified investment in RRSP, RRIF, DPSP, RESP, TFSA and RDSP, and eligible for ISAs in the U.K.
- The Company is able to pay regular taxable dividends and capital gains dividends
- All taxable dividends paid to common and preference shareholders are designated as eligible dividends

DIVIDEND REINVESTMENT & SHAREHOLDER PURCHASE PLANS

- As well as with reinvested dividends, shareholders may purchase additional shares for cash (minimum \$100 – maximum \$5,000) every quarter. Shares are purchased on the open market, with participants paying the average cost while the Company pays all administrative charges, including commissions.
- Note: U.S. shareholders only eligible for the dividend reinvestment segment of the plan.

COMMENTARY AND OUTLOOK

Quarantines and lockdowns have become commonplace, used as somewhat crude, but effective, defensive measures until science and medical alternatives could be discovered and global economic activity had ground to a halt in the initial stages of the global response. Under those conditions it was impossible to determine if or when the countermeasures would succeed let alone quantify the recovery probabilities.

Equity markets plummeted as COVID-19 spread and deepened its coverage. As the situation worsened and reality set in, investors began selling in an aggressive manner. This trend accelerated through February and March and most major global indices dropped 30% or more. Even with a positive start earlier in the year, the Canadian S&P/TSX Composite Index (S&P/TSX) fell victim to the onslaught and had dropped in excess of 34% by late March.

As the spread of the virus took hold and then accelerated, central banks and most governments around the world eventually took action in the form of monetary policy and fiscal packages. Their collective response was an attempt to stabilize the situation, maintain a sense of order and to bridge some time between the shutdown scenario and its indeterminable reopening. The initiatives have provided an initial sense of relief and it remains an ongoing experiment in real-time.

The pandemic has touched almost everything, including markets, and its effect was quick and decisive. As for equity markets, they experienced the fastest 30% sell-off ever, exceeding the pace of declines during the Great Depression by a wide margin. Along with the speed and depth of the drop, volatility rose to new heights. The VIX, a standard measurement unit used for volatility, peaked around 85, an extraordinary level considering it had been in the 10 to 20 range in prior months. In addition, there had been virtually no visibility as to market direction. Daily reversal return patterns in the high single-digits to low double-digits became commonplace and rare trading halts and both up-limits and down-limits were often triggered. It was apparent that an epic level of confusion existed in the marketplace. Fortunately, an incredible recovery from the bottom ensued and drove most markets into the positive by year end.

At December 31, 2020, CGI is outperforming its benchmark with a year-to-date NAV return, with dividends reinvested, of 38.1% compared to the S&P/TSX total return of 5.6%. The returns and differentials have fluctuated greatly, and the year-to-date results are quite an achievement considering the volatility that has been experienced in equity returns.

During these uncertain times, the Manager will maintain adherence to its long held and battle-tested principles that suggest a long term approach applied consistently to a properly constructed, diversified portfolio of quality investments while pursuing new opportunities, is the winning strategy. We do not intend to stray from those fundamentals. This constant has delivered a very good historical track record and will be instrumental in the pursuit of further success in building shareholder value well into the future.
